
Create Successful Service Designs by Using these Goals & Tips

Service designs are complex. A successful service delivery often involves different design outputs, different channels and multiple parts of your organization. It’s important not to get lost in the details. Knowing which goals to strive for will help you focus your attention and provide a benchmark for measuring the success of your service design.

There are some 'gold standard' approaches that all great service designs have in common. We've listed them here, along with some tips for how to reach them. You can also add additional goals that apply to your specific service design, as well as ideas for how to reach those goals. Use the goals to help steer your service design process.

Overall Goals of Service Design

- To transform the service delivery experience for both customers and your organization.
- To improve digital, physical and social experiences with human-centered design approaches to service delivery.

- To reduce complexity of system disconnects and causes of customer pain.
- To align the needs of customers, service providers and stakeholders.

How to Reach the Service Design Goals

1. **Always consider backstage processes and systems.** You need to understand the practicalities of how to deliver your service if you want it to succeed.
2. **Ensure there are no disconnects between backstage and frontstage.** Your service delivery chain is only as strong as its weakest link, so you need to ensure that you consider every detail.
3. **Be detail-oriented when you design the frontstage experience.** This is the part of your service design that your customer will experience, so it needs to be faultless and pleasant.
4. **Ensure that your team and stakeholders are engaged in delivering your service.** Services are complex, so you need the help of the entire organization to be able to deliver a great service experience.
5. **Ensure that you have specialist knowledge of service design on your team.** You need someone with a large 'toolbox' of service design skills, so you always know which method to use when.
6. **Ensure that you Frame the Total Problem (FTP).** You can only understand which goal you are trying to achieve if you have a full understanding of your design problem.

Service Design: Delivering Integrated Service Experiences

Intermediate course

Service Design is important! People engage with services every day and everywhere, so **as designers we can make a big difference** to a lot of people if we ensure that those services are efficient and provide a great experience. We can also make a big difference to our businesses and organizations if we ensure that services are delivered better than our competitors.

By the end of the Service Design: Delivering Integrated Service Experiences course, you'll know how to confidently run a service design project and which tools and methods to use along the way. You'll also know how to evangelize service design in your organization and with your stakeholders, and how to assemble a service design team.

If you're already familiar with **human-centered design methods** or work in **user experience, product design** or even **C-Suite business management**, then this course will extend your skills and show you how to deliver integrated and omni-channel services as part of a collaborative team. You'll be able to apply a deeper understanding to your existing work to achieve even better results.
